

The CENTAURO is an 8X8 Wheeled Armoured Combat Vehicle manufactured by the Italian Consorzio Iveco Fiat - Oto Melara.

The CENTAURO will reach a max speed of 100 km/h on main roads, and meets all NATO mobility standard specifications for obstacles, trench breaching and slope tests etc.

The vehicle is fitted with run flat tyres allowing the CENTAURO to operate in the most extreme terrain. Low ground pressure allows the vehicle to manoeuvre over rocks, sand, marsh and soft grounds.

All of the CENTAURO's features have been extensively tested in extreme environmental conditions including hot, dry deserts, cold and icy Nordic countries and a rain forest environment.

The vehicle hull is made of ballistic steel which gives high protection against small calibre cannons, artillery and mortar shell splinters. The CENTAURO can be fitted with add-on armour plates without any significant loss of mobility.

The HITFACT[®] turret accommodates a three crew providing flexibility of operator tasks. The turret can be fitted with 105mm and 120mm main weapons which can fire all existing standard NATO kinetic or chemical energy ammunition rounds

CENTAURO **ARMoured COMBAT VEHICLE**
